DESCRIPTION

CAE series are discrete or MMIC PIN diode based current or voltage controlled electrical attenuators that operate at the frequency range from DC to 110 GHz. These attenuators are especially designed for low insertion loss and high attenuation applications. While PIN diode based attenuators are designed for waveguide bandwidth operation from 18 to 110 GHz, the MMIC based attenuators are designed for broadband operation from DC up to 50 GHz. The maximum attenuation value up to 100 dB is available.
