FIC & FCC Series

## DESCRIPTION

**FIC and FCC** series narrow band connectorized isolators and circulators cover common Radar and wireless communication frequency bands up to 20 GHz. The isolator is an ideal device where the port isolation is required, while the circulator is commonly used as a duplexer for transceiver subsystems where the transmitter and receiver ports share a single antenna port. The connectorized isolators and circulators equipped with either SMA(F) or SMA(M) connectors for ease connections. The low cost **FIC** and **FCC** series isolators and circulators offer very compact sizes that can be easily inserted into the sub-assembly with minimum size increase. While the standard specifications are shown below, the custom ones with wider bandwidth and higher isolation are available.
